PROJECTS

- **Food-Recipes**   **Live Link** | **GitHub >** Client | Server
  Introducing Food Recipes: A website that shows the recipes of all available chefs.
  - Trying to give a reasonable and user-friendly design.
  - For secure login, the site uses firebase authentication, ensuring user data privacy and protection.
  - Everyone can view how many chefs are available and see their details. But everyone needs to login for view chef's recipe

  Technologies: The website was built using React Query for client-side, For the backend, Node.js and Express were use.

- **Toy-Marketplace**   **Live Link** | **GitHub >** Client | Server
  Introduction KIDZ: A simple full-stack Toy Marketplace website.
  - Users can register and log in to access additional features such as managing their own toys and viewing details of each toy.
  - This website includes features like a homepage with a banner section and a shop by category section, a blogs page, an all-toys page, and private routes for adding and managing toys.
  - The website allows users to view and add their own toys for sale.

  Technologies: React-router-dom, react-hook-from, react query, Express, MongoDB, Firebase authentication
